

QUICK-START

For Teachers & Educators

Run your first self-reflection in about five minutes — then turn it into growth you can act on. No login, no code.

1 Open the site

Go to architectureofgrace.org on any device. It works offline once it has loaded.

2 Run a self-reflection

Begin Self-Reflection → Student, choose a grade band and Quick or Thorough. Students answer on their own devices; answers stay local unless your school turns on optional Google Sheet sync.

3 Read the group

Open the Dashboard → Overview and Class trends. The class view is aggregate — but you can open any individual student, and if your school has sync turned on, that response is in the school's Sheet too.

4 See the tiers

Dashboard → MTSS Report (gold button). No data yet? Tap Load demo data.

5 Watch growth over time

The Trajectory tab plots each student across self-reflection windows and school years, with the support bands shaded and a dashed goal target.

6 Write the goal

The Goal Builder turns a saved self-reflection into a relationship-centered IEP goal with objectives by reporting period, and monitors progress on the same screen. Copy or print for your IEP system.

TRY THESE — new and worth it**• Home + School on one chart**

Trajectory tab, then Both: overlay a student's school and home self-reflections, and link them as the same child.

• The “What helps me” picker

On the results screen, students tap the strategies that calm them — saved on that device and brought back next time.

Tried it? Open the Pilot Program page and share how it went — what confused a student or broke is the most useful thing you can tell us.
